

We are looking to build our team

Role 2: Power Analyst

Power Analyst role

You will be responsible for the operation and delivery of Timera Energy's power analytics capability, reporting to our Director of Power.

This will mean directly engaging with our client base of private equity & infrastructure funds, IPP generators and utilities. You will have responsibility for understanding and solving client problems, using our in-house market and asset margin modelling capability and maintaining our extensive power database.

Benefits of working with Timera

Timera Energy has a niche franchise working with investors & owners of flexible power assets. This means the successful candidate will enjoy a stimulating variety of analytical challenges, working both with senior industry experts within the Timera team and leading energy companies and investors as clients. You will also enjoy an open and entrepreneurial environment where innovation is key.

We offer very competitive packages as well as the ability to directly participate in company value upside. We offer significantly more flexibility and autonomy than other energy companies or consultancies. This covers location, work hours, other commitments and remuneration structure.

Role requirements

- Industry experience in a commercial power analytics role e.g. 3-5+ years
- Working knowledge of power markets
- Strong Excel skills including VBA
- Ability to collect, analyse and interpret complex quantitative data and information
- Strong initiative, self-motivation and time management skills
- Ability to deliver client work efficiently to externally driven deadlines

Other useful skills/expertise

- Flexible power asset valuation modelling expertise
- Experience with stochastic modelling (e.g. asset dispatch & valuation models)
- Quantitative modelling skills
- Other programming skills beyond VBA (e.g. C++, Matlab, Python, R)
- Power risk management expertise

If you are interested, please send a CV and brief covering note to info@timera-energy.com.
